Whitworth F5 VPN Staff Connection

Open a web browser to https://vpn.whitworth.edu. You may be prompted to install a web plug-in. After you agree, it will run some checks and present you with a login page. Enter your network username and password along with the Google Authentication Code you will find in the app.

You will get a pop-up window showing the connection starting. It should show data packets being sent and received.

The window will automatically close once it is connected, and you will see a pop-up in your task bar with the F5 icon stating you are connected.

The web browser will need to stay open the entire time you require a VPN connection. You can minimize the window while you work. When you are ready to exit your VPN connection, you can either click on
the log out button or simply close the browser. You will be given the final warning when exiting your VPN session.

Message from webpage

You closed the window containing the Webtop. Do you want to close current connections?
