List all contents, preferably products rather than reagents. Full names, not formulas.

Indicate the waste source with either a course number or a person's name.

The date the bottle is full or will no long be used. Move to main accumulation area within 3days.

The weight of the empty container (in grams) prior to the addition of any waste.

Give a percentage for each component. They must add to 100%! Calculate by mass or volume.

Indicate the hazard(s) posed by the waste by checking the appropriate hazard box(s) or by affixing a separate hazard warning sticker. If you don't know, you shouldn't be generating this waste. Stop and ask.

Keep lid secure at all times (expect when adding waste of course).

Don't fill past the shoulder of the bottle.

Keep waste container in a secondary containment bin.

Use a funnel to avoid spills. Clean up spills immediately.
